

More than 500 fully automated systems manufactured by DEAMCO are in operation throughout the world.

deamco's capabilities

DEAMCO

is comprised of an integrated team of highly competent technical professionals who devote all of their time and efforts to the development, design, manufacturing and sale on an international scope, complete automated equipment, customized systems for the production requirements of free and semi-free bulk material handling process.

When your requirements are submitted to DEAMCO, you immediately have the benefit of global expertise gained by DEAMCO from the design and construction of many similar projects.

DEAMCO'S organization is unique in that it offers the benefit of its specialized experience gained over many years and supports its recommendations with modern, up to date equipment to accommodate your requirements efficiently and economically.

CONSULTATION

DEAMCO'S experienced engineers determine your requirements. They investigate the parameters of the project, product type, production rates, industrial engineering interface, and economic feasibility.

PRODUCT TESTING

DEAMCO tests new products in its mechanical laboratory for physical and handling characteristics, friability, and degradation.

PROPOSAL

DEAMCO provides you with comprehensive formal proposal, complete with conceptual layouts.

ENGINEERING

Upon receipt of your order, DEAMCO prepares detailed engineering drawings. DEAMCO insures proper interface between units of the system for maximum operating efficiency.

MANUFACTURING

Your equipment is produced in DEAMCO's fabricating facilities, utilizing skilled personnel, standardized production techniques and stringent quality control procedures. DEAMCO monitors production schedules by computer to insure on-time shipments.

INSTALLATION & SERVICES

Following project installation, DEAMCO trains operating and maintenance personnel, provides customized manuals, and perform after sales service.
